

New Building Update **from Jim Curtis and the Building Committee**

On Christmas Eve, our congregation's president signed a contract with R&W Builders, Inc. of O'Fallon, Illinois to build Phase One of our Vision 20/20 program. Additionally, we received the official paperwork from the city of O'Fallon approving our construction design plans.

We now move to the building permit stage. In this next phase, our architect (Farnsworth and Associates) coordinates with the city for the detailed design plans review and to make any adjustments (if needed), with the goal of obtaining the building permit to build. The building committee, architect, and general contractor will also continue to look for value engineering opportunities to reduce costs without impacting scope or quality.

Between now and the beginning of spring, we should have the building permit approved and a ground-breaking ceremony scheduled.
